FemBot Verbal SMS Opt-In Script

Public customer-facing consent script | Version 1.0 | Effective August 20, 2026

Purpose and setting

This document is public proof of the exact verbal consent script used for the FemBot SMS Messaging Program. An authorized FemBot household administrator reads the script during a live, one-to-one in-person or telephone household onboarding conversation before enrolling a household member or caregiver's mobile number.

Script read to the recipient

"Would you like to receive recurring transactional text messages from FemBot by FemLabs37 about household schedules, reminders, tasks, transportation, appointments, service updates, and related household coordination? Message frequency varies. Message and data rates may apply. Reply STOP at any time to unsubscribe and HELP for help. You can review our Terms at <https://femlabs37.com/terms/> and Privacy Policy at <https://femlabs37.com/privacy/>. Please answer yes or no."

Consent decision and record

Only an explicit verbal yes is accepted. A no, silence, ambiguity, or refusal does not enroll the recipient. The household administrator records the affirmative consent before recurring SMS messages are enabled. The website documents this process but does not collect consent.

Enrollment confirmation

After an affirmative yes is recorded and before recurring messages begin, the administrator sends the following confirmation:

"FemBot by FemLabs37: You are enrolled in recurring transactional household coordination messages. Message frequency varies. Message and data rates may apply. Reply HELP for help or STOP to unsubscribe. Terms: <https://femlabs37.com/terms/> Privacy: <https://femlabs37.com/privacy/>."

Program information

Program: FemBot by FemLabs37
